EDUCATION

University of California, Berkeley

B.S. Electrical Engineering and Computer Sciences

Berkeley, CA

Expected Dec 2026

Relevant Coursework: Digital Design & Integrated Circuits (FPGA), Circuit Analysis, Designing Information Devices and Systems I & II, Machine Structures, Artificial Intelligence, Linear Algebra & Differential Equations, Discrete Mathematics & Probability

EXPERIENCE

NASA L'SPACE Program

Remote

Electrical Engineer - Mission Concept Academy

Jun 2026 - Sep 2026

- Support electrical and power subsystem design for a lunar south pole rover mission investigating volatile characterization, lunar interior science, and in-situ resource utilization feasibility.
- Develop Power Subsystem Preliminary Design Review deliverables covering requirements, architecture, power-budget assumptions, verification, procurement, and fault-recovery planning.
- Analyze solar generation, lithium-ion storage, PDU distribution, BMS monitoring, safe-power modes, and cross-subsystem loads; coordinate with mechanical, payload, thermal, and CDH teams on interfaces, power allocation, and integration risks.

Autonomy, AI & Robotics Contributor - NPWEE

Sep 2026 - Dec 2026

- Selected to contribute to lunar mission concept development focused on rover autonomy, AI-enabled decision-making, and robotic surface operations.
- Planned technical scope includes autonomous navigation, obstacle avoidance, sensor integration, autonomy architecture, requirements analysis, and mission risk assessment.

Berkeley Vertical Farming

Berkeley, CA

Electrical Engineer

Aug 2025 - Present

- Design and test automation, robotics, and sensor-based crop-monitoring solutions for vertical farming systems.
- Prototype hydroponic nutrient and water-delivery mechanisms, integrating software, electrical hardware, and plant-science requirements with an interdisciplinary team.

UC Berkeley Electrical Engineering and Computer Sciences

Berkeley, CA

Undergraduate Researcher

Jun 2025 - May 2026

- Developed automated, real-time test pipelines for Lingua Franca federated programs, integrating Raspberry Pi hardware runners into GitHub Actions to evaluate timing correctness under real network and clock variability.
- Implemented diagnostics for deadline misses, clock drift, and nondeterministic distributed-reactor behavior, supporting validation of decentralized coordination and deterministic execution.

Helping Hands Corporation

Remote

Software Engineer Intern

Jun 2025 - Aug 2025

- Developed and tested Python/C++ modules for intelligent task automation, including low-level components that interfaced with operating-system services.
- Reviewed and debugged code in an Agile team and evaluated emerging AI, automation, and systems technologies for experimental prototypes.

El Dorado County Elections Department

Placerville, CA

IT & Student Assistant

Apr 2022 - Dec 2024

- Installed, configured, and supported voting machines, ballot tabulators, voter registration databases, and related election software and hardware.
- Diagnosed system failures and resolved time-sensitive technical issues during election preparation and polling-site operations.

PROJECTS

32-bit RISC-V Processor | Logisim Evolution

- Designed and implemented the ALU, control logic, register file, immediate generator, and memory interface; verified instruction execution through unit and integration testing.

Treble Boost Effect Box | Analog Circuit Design

- Designed and built an op-amp active high-pass filter; calculated component values, measured frequency response, and tuned gain to emphasize high-frequency audio signals.

Robot Evolution | C++

- Built an evolutionary robotics simulation with procedural maps, sensor-based decision-making, fitness evaluation, and reproduction logic.

TECHNICAL SKILLS

Electrical & Hardware: Circuit analysis, digital logic, op-amp circuits, active filters, Arduino, Raspberry Pi, sensor integration, electrical harness construction

Programming: C/C++, Python, Java, JavaScript, Ruby, Scheme, SQL

Engineering Tools: Logisim Evolution, MATLAB, AutoCAD, SolidWorks, Git/GitHub, GitHub Actions, Linux/Unix, VS Code
